

## New Product

Tronair has added the 07-3013-0900 fuel system leak test cart to our product line. The unit was designed to flush the fuel lines of any debris generated during the assembly process and verify the integrity of the fuel lines on the Sikorsky S92. This is accomplished by using a combination of pneumatic motors, pumps and flow meters. The maximum flow is obtained at 12 gpm at 50 psi. The unit also filters the fuel during this process.

*“ The cart showed flawless function and was easy to use.”*

Sikorsky Aircraft Corp.

## Spotlight Product

Tronair has added the 03A5845C0000 Embraer Legacy stabilizing stand to our product line. The stabilizing stand comes equipped with padding on the adapter that comes in contact with the aircraft skin and an alarm that blasts a warning when weight on the load cell exceeds safe limits. The stabilizing stand alarm can save thousands of dollars in damage by preventing you from lowering the jacks and not removing the tail stand.
